

Rob Stokes

Senior Software Engineer

Professional Summary

Highly skilled and dedicated developer with a proven track record developing efficient and maintainable software. Used to working in professional agile teams with a wide range of responsibilities.

Experience

Senior Software Engineer

May 2023 - Present

Superdry

- Developed robust integrations for leading 3rd party retailers such as Next, Amazon, and eBay, ensuring smooth data exchange and enhancing business performance.
- Utilized AWS to architect a resilient, serverless, event-driven system, written in Typescript, that enabled seamless integration between systems and platforms.
- Created and managed diverse data feeds, ranging from CSV/XML files to API endpoints, allowing efficient handling of product and stock information.
- Effectively processed incoming orders and transformed them into a standardized structure, improving order management and fulfillment processes.
- Proficiently handled high-frequency events, including real-time stock updates, by leveraging SQS, SNS, and DynamoDB streams, maintaining accurate and up-to-date information.
- Played a key role in generating ~£100,000 in daily revenue, through reliable integrations and streamlined operations.
- Contributed to the technical steering group, helping to define and enforce coding standards across the department, ensuring consistency and high-quality code.
- Acted as a mentor to junior team members, providing guidance, support, and fostering a collaborative learning environment.
- Participated in code reviews and knowledge-sharing sessions, elevating the team's technical expertise and fostering professional growth.

Test Automation Engineer (Contract)

Nov 2021 - May 2023

Superdry

Creating Automated tests using Cucumber and Selenium

Software Engineer

May 2019 - Nov 2021

Headforwards

Dedicated React.js developer with a specialisation in crafting dynamic applications and widgets for a Cloud Management Platform. Proficient in visualising complex data from leading cloud providers such as AWS, Azure, and others. Adept at leveraging React.js's capabilities to create intuitive and user-friendly interfaces that enhance the management and analysis of cloud resources.

Founder / Director

Sept 2015 - May 2019

LimeNinja

- Successfully conceptualize, develop, and deploy customized software solutions for prominent clients, with a primary focus on enterprise applications.
- Lead the entire project lifecycle, from requirement specification to solution architecture and seamless production deployment.
- Nurture strong client relationships, engaging in proactive communication to understand and address client needs effectively.
- Spearhead sales and marketing efforts, fostering business growth and client acquisition through compelling proposals and presentations.
